

March of the Minions!

1

Colour $\frac{1}{4}$ of them in their normal colours.

Some have been injected with PX-41 and have turned crazy – colour $\frac{3}{10}$ of them purple.

Minions LOVE bananas!

Not all of the bananas are ripe . . . $\frac{1}{3}$ of the bananas are ripe, so colour them yellow. $\frac{2}{5}$ of the bananas are not ripe enough yet, so colour them green. The rest are past their best, so colour them brown.

2

It's party time and for the minions, there's no party without "gelato"!

3

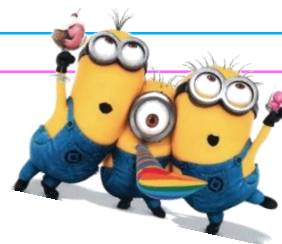

This lucky minion has a super-tall ice cream!

$\frac{1}{4}$ of the scoops are mint, so colour them green.

$\frac{1}{6}$ of the scoops are strawberry, so colour them pink.

$\frac{1}{3}$ of the scoops are chocolate so colour them brown.

Answers:

- 1) 5 should be coloured in their normal colours (yellow and blue) and 6 of them should be coloured purple
- 2) 5 bananas should be yellow, 6 should be green and the rest (4) should be brown.
- 3) 3 scoops should be green, 2 should be pink and 4 should be brown.
